Natural Language Processing and Information Systems Andrés Montoyo, Rafael Muñoz, Elisabeth Métais, 2005-06-01 NLDB 2005 the 10th International Conference on Applications of Natural Language to Information Systems was held on June 15-17, 2005 at the University of Alicante Spain Since the first NLDB conference in 1995 the main goal has been to provide a forum to discuss and disseminate research on the integration of natural language resources in information system engineering The development and convergence of computing telecommunications and information systems has already led to a revolution in the way that we work communicate with each other buy goods and use services and even in the way that we entertain and educate ourselves The revolution continues

and one of its results is that large volumes of information will increasingly be held in a form which is more natural for users than the data presentation formats typical of computer systems of the past. Natural language processing (NLP) is crucial in solving these problems and language technologies will make an indispensable contribution to the success of information systems. We hope that NLDB 2005 was a modest contribution to this goal. NLDB 2005 contributed to advancing the goals and the high international standing of these conferences largely due to its Program Committee composed of renowned researchers in the field of natural language processing and information system engineering. Papers were reviewed by three reviewers from the Program Committee. This clearly contributed to the significant number of papers submitted: 95. Twenty-nine were accepted as regular papers while 18 were accepted as short papers.

Safety Pharmacology - Risk Assessment QT Interval Prolongation and Beyond Esther Pueyo, Blanca Rodriguez, 2018-08-16 Current regulatory guidelines for cardiac safety utilize hERG block and QT interval prolongation as risk markers. This strategy has been successful at preventing harmful drugs from being marketed but criticized for leading to early withdrawal of potentially safe drugs. Here we collected a series of articles presenting new technological and conceptual advances including refinement of ex vivo and in vitro assays, screens and models and in silico approaches reflecting the increasing effort that has been put forward by regulatory agencies, industry and academia to try

and address the need of a more accurate mechanistically based paradigm of proarrhythmic potential of drugs This Research Topic is dedicated to the memory of Dr J Jeremy Rice our wonderful friend and colleague Interactive Theorem Proving Sandrine Blazy, Christine Paulin-Mohring, David Pichardie, 2013-07-22 This book constitutes the refereed proceedings of the 4th International Conference on Interactive Theorem Proving ITP 2013 held in Rennes France in July 2013 The 26 regular full papers presented together with 7 rough diamond papers 3 invited talks and 2 invited tutorials were carefully reviewed and selected from 66 submissions The papers are organized in topical sections such as program verification security formalization of mathematics and theorem prover development
